

TENANT Specific Space Allocation

100% SOFTWARE CONTROLLED • NO COUNT INPUTS • NO RELAYS

FEATURES

- Specify Any Number Of Tenant Groups
- Set Any Number Of Spaces Per Group
- Issue Any Number Of Cards Per Group
- Use Anti-Pass-Back or Not
- Optional Lot Full Output For Each Group
- Does Not Affect Master Occupancy Counter
- Works With Any Technology Including V.I.D.

User Defined Count Limits

This new software module allows parking managers to set a specific number of reserved spaces for individual cardholder (tenant) groups. Each group may have any number of cardholders, but the software will control how many are allowed in the parking lot at a time. Each group may have a different number of reserved spaces.

How It Works

A unique Security Level is defined for each tenant group. Each Level is associated with a space counter which may be set at any value by parking management.

If a cardholder is Valid in that Level, and the counter is greater than zero, and there is no anti-pass-back violation, the card is admitted, and the counter for that group is internally decremented by one. When any member of that group exits, the counter is internally incremented by one.

No Free Out If You Pulled A Ticket

A cardholder who is forced to pull a ticket to enter the lot because his group's allocation is full, will not get a "free" out by using his card in the exit reader when Anti-Pass-Back is enabled.
