New Toye Universal Command Modules

The new Toye Universal/Learn Command Module has these features:

1. Automatically accepts most proximity card reader Wiegand output formats without any programming needed.
2. Learns up to 16 site codes for auto degraded mode with the flick of a switch.
3. No more EPROM's to change out. This unit will work in most existing Toye jobs: plug and play.
4. Available at the same price as the standard 4120/4122 series modules on new jobs, and at a very slight up charge for existing jobs.
5. Old 4120/4122 series command modules can usually be upgraded to the new L4120/L4122 modules for doing field service swaps.
6. The new L4120/L4122 Universal/Learn modules are interchangeable with existing 4120/4122 modules, and are UL-294 listed.
7. LED Added to show that unit has power.
8. New Jumpers are provided instead of external pull up resistors when needed.
